

TeamExpress >>>

The TeamFrame PMO QuickStart implementation package

Overview

Many companies are seeking to achieve workforce productivity and project outcome improvements by integrating best process with best practice. To-date these concepts are often disconnected, leaving companies with good process definition and good operational practice, but with no reliable or efficient way to constantly improve the way in which they work.

To take your company to the next level of operational control and response, a collaborative and flexible template approach can be used. This will refine and integrate project, programme, and initiative best practice and enable more effective and synchronised response to change.

TeamFrame improves management performance and service delivery results

TeamExpress

To ensure TeamFrame meets your organisation's current and future needs, we will work closely with you over a 30 day period to better understand your current work environment and to ensure the TeamFrame application suite can be correctly deployed.

Outcomes

The *TeamExpress* implementation package delivers the following enterprise project and workforce management benefits:-

- Understanding your company's collaborative project management needs
- Identification and definition of important project and job processes
- Project initiation and start-up management with company wide visibility
- Staff training and collaborative Project Management tool exposure at executive, project manager and worker level
- Understanding of TeamFrame key benefits, such as:
 - portfolio and program project consolidation
 - online dashboard reporting
 - financial tracking and control
 - workflow identification and improvement
 - straight-through timesheeting and project progress reporting
 - more efficient workforce task allocation
 - skill needs forecasting and matching
 - external resource project collaboration
 - effective risk management
 - operations governance and transparency
- Identification of information flow gaps and bottlenecks
- Pilot outcome summary and organisational readiness evaluation
- Rollout proposal including change management strategy

Description

We will spend 5 to 10 days on site working with you. You will select three projects of a suitable size provide a plan for project completion. We will work with you through ROI targets and identify required TeamFrame pilot outcomes. We will make available a 10 user hosted customer account (activated for 30 days) that can be accessed from any computer with Internet access. We will work with you to capture project details into TeamFrame, allocate work to project resources, and assist (where necessary) in managing the project. All data can be extracted and returned to you in Microsoft Project XML format should you decide not to continue with the TeamFrame implementation.

This hands-on deployment and use of TeamFrame is designed to ensure there is a good fit between TeamFrame characteristics and your needs and will ensure the various aspects of collaborative distributed project management are well understood by you and your team.

Cost

\$10,000 (excl. GST)
